

CONCLUSION AND FUTURE ENHANCEMENTS

This application is beneficial for security purpose like if you are in danger your friends can find out you by tracking your ISP location. In real world those who kidnap by some terrorism Activity can be found their recent isp activity. This project is implemented using various programming language and the MySQL DB. Using the AhrefLogger, anyone can use it in daily and personal life without disclosing their identity. The application will send automatically user location on server and it is tracked by using client-server technology. Also, different attributes have been added to the project which will prove to be advantageous to the system. This is useful for any Normal person or company security researcher of an organization. It is not just for an organization; everyone can use it because it is freely available.

We have few limitations in project so in the future enhancement we will introduce new features such as user battery %, image logger. Payment gateway and much more. Another one is application interface. In next enhancement we will work on improving User Interface such as more interactive indicators, light colors, easy to navigate, etc. The last user support, we will create a blog for news and articles and support ticket system for user to querying us about application drawbacks and problems that team will helpful to solve user problems and getting feedback more clearly.
